Use-case: using multiple animals, obtained from multiple sources

Why: treating two hierarchies in a unified way

- Hierarchies: animals and animals sources (repositories)

DatabaseRepo

implements

getAnimalById, from a DB

AbstractAnimalRepo

interface

LocalMarketRepo

getAnimalById

getAnimalById, for LocalMarket

abstract class

AbstractAnimal

extends

Cow

Hamster

Other use-case: obtaining users (of different types) from multiple source, displaying their type

- User types: Admin, Manager, Developer, Tester
- Sources: Database, FileSystem, LDAP
